

# A DAGGER FROM VERBICIOARA (DOLJ COUNTY)

RADU BĂJENARU

This paper presents a bronze **dagger**, previously unpublished. It was found at Verbicioara (Dolj County), during the 1949 excavation season. The blade is simple, with biconvex section, and has a rivet hole. Compositional analysis revealed a tin concentration of ca. 9%, which indicates that the dagger dates from the later stages of *Verbicioara Culture*.
